Garland ME (Next Generation Grill) Splash Shields

Based on customer feedback Garland have developed a splash shield for the ME & MG grills. The Splash Shield when fitted to the rear of the grill helps to reduce cooking grease buildup on the rear back splash of the grill. The reduction of grease in this area will help to reduce the time required for the daily cleaning tasks. These will be included as standard on all new grill from September 2020, serial number 20091001XXXXX

The shields can be ordered using Part Number: 4604253 (1 per lane)

The Splash Shield will be available as an accessory using part number 460253. They are sold individually so you will need to remember to order one per lane.

The shield is easily fitted and removed, and it can be washed away from the grill with the UHC trays at the end of the day as part of the restaurants daily cleaning procedure.
To fit the shield, you need to locate the slots on the rear of the shaft. Locate the fitting tabs on the shield as pointed to in the image.

Holding the tab on the front of the shield lift the shield and align it with the slots on the shaft tube. Now slide the shield onto the groves until it reaches the bottom.

To remove the shield just reverse the procedure shown above.

**Note:**

- If you are fitting or removing the shields on a hot grill, please ensure you are wearing the correct PPE to avoid burns from the hot surfaces.
- If the shields become damaged, then they should be replaced and not used.

For videos showing how to install and remove the Splash Shields please scan the below QR code: Go to Crew then videos.

Many Thanks
